PROFESSIONAL SUMMARY

Software Engineer with 3+ years of professional experience building scalable, production-grade applications across backend and frontend systems. Proven expertise in C#, .NET, TypeScript, JavaScript, and Python with strong foundation in cloud-based SaaS platforms, RESTful APIs, and modern frameworks including React, Blazor Server, Node.js, and Express. Currently architecting SmartSchedule Healthcare, an enterprise-grade AI-powered healthcare SaaS platform on .NET 10+ and Azure addressing a \$150B market opportunity with 40% no-show reduction and 50% administrative efficiency gains. Demonstrated ability to deliver measurable business impact: 25% improvement in user engagement, 30% reduction in processing time, and 20% operational efficiency gains through optimized automation. Experienced in agile methodologies, test-driven development, code reviews, and cross-functional collaboration. Skilled in developing clean, maintainable code for enterprise applications with PostgreSQL, SQL Server, MongoDB, and Redis. Active GitHub contributor with deployed full-stack projects demonstrating complete software development lifecycle expertise from requirements gathering to production deployment.

TECHNICAL SKILLS

Programming Languages:	C#, .NET 10+, TypeScript, JavaScript (ES6+), Python, C, SQL
Backend Development:	ASP.NET Core, .NET Core, Entity Framework Core, Blazor Server, Node.js, Express.js, Flask, RESTful APIs, Microservices Architecture, SignalR
Frontend Development:	React.js, TypeScript, HTML5, CSS3, Redux Toolkit, Blazor WebAssembly, Responsive Design, Component-Based Architecture
Databases & Data:	SQL Server, PostgreSQL, MySQL, MongoDB, Redis, Database Design, Query Optimization, Entity Framework Core, Data Migrations
Cloud & DevOps:	Azure (App Services, SQL Database, Redis Cache, Service Bus, Key Vault), Azure DevOps, Terraform, Docker, CI/CD Pipelines, GitHub Actions, Infrastructure as Code, Linux/Unix Administration
Testing & Quality:	Unit Testing, Integration Testing, Test-Driven Development (TDD), xUnit, Jest, pytest, SonarQube, Code Quality Analysis
Development Tools:	Git/GitHub, Visual Studio 2022, VS Code, Postman, Swagger/OpenAPI, REST API Testing, Git Workflows (Branching, PR, Merging)
Methodologies:	Agile/Scrum, Sprint Planning, User Stories, Backlog Refinement, Code Reviews, Pair Programming, Technical Documentation
Additional Skills:	HIPAA Compliance, JWT Authentication, WebSockets (Socket.io), Third-Party API Integration, Dependency Injection, SOLID Principles

PROFESSIONAL EXPERIENCE

Software Engineer <i>Cognativ Technology Limited — Nairobi, Kenya</i>	November 2024 — January 2026
---	-------------------------------------

- Developed and maintained scalable backend services and APIs for SmartSaaS™ cloud platform using .NET Core, C#, Blazor Server, and Entity Framework Core, serving enterprise clients across multiple

industries

- Designed and implemented RESTful APIs with comprehensive error handling, validation, and authentication mechanisms following industry best practices and security standards
- Built responsive frontend components using Blazor Server with real-time data synchronization via SignalR, improving user experience and application interactivity
- Collaborated with cross-functional teams including Product, QA, and DevOps in agile sprints to deliver features on schedule with 95% bug-free deployment rate
- Wrote unit and integration tests achieving 80% code coverage, participated in peer code reviews, and contributed to technical documentation for knowledge sharing
- Optimized database queries and implemented Entity Framework Core migrations for SQL Server, reducing API response times by 35% through indexing and query optimization
- Participated in architectural design sessions and contributed to technical decision-making for system scalability and maintainability
- Mentored junior developers on .NET best practices, SOLID principles, and clean code architecture

Operations Intern

November 2024 — April 2025

Alliance Bioversity CIAT — Nairobi, Kenya

- Developed automated backend systems using Python and Flask, building RESTful APIs that reduced operational processing time by 20% through optimized data workflows and efficient business logic
- Designed and implemented scalable data processing tools and internal web applications for cross-functional team of 12 members, improving collaboration efficiency and reducing manual tasks by 40%
- Integrated PostgreSQL database with Python applications, writing optimized SQL queries and implementing data validation for accurate reporting
- Collaborated with stakeholders in agile environment to gather requirements, translate business needs into technical specifications, and deliver measurable solutions within tight deadlines
- Wrote comprehensive technical documentation including API specifications, system architecture diagrams, and user guides for knowledge transfer and maintainability
- Participated in code reviews, knowledge-sharing sessions, and daily standups to improve code quality and foster team learning culture

Software Developer Intern

June 2023 — September 2023

REAL BIZ Digital — Nairobi, Kenya

- Developed and maintained responsive web applications using React.js, TypeScript, and Node.js for 3 client projects, increasing user engagement by 25% through feature implementation and UX improvements
- Designed and implemented RESTful APIs with Express.js, integrated third-party services, and optimized backend performance, reducing data processing time by 30% through efficient algorithms
- Built reusable React components following component-based architecture and utilized Redux Toolkit for state management across complex application workflows
- Wrote comprehensive unit and integration tests using Jest to validate feature functionality, achieving 75% code coverage and maintaining code quality standards
- Participated in agile ceremonies including daily standup meetings, sprint planning, retrospectives, and code reviews as active team member
- Collaborated with QA engineers to identify and fix bugs, validate features, and ensure production-ready releases through thorough testing protocols

- Utilized Git workflows including feature branching, pull requests, and code merging for version control and collaborative development with senior engineers

EDUCATION

Bachelor of Science in Computer Science

2021 — 2025

University of Nairobi — Nairobi, Kenya

- Comprehensive software engineering curriculum including Data Structures & Algorithms, Software Engineering, Database Management Systems, Operating Systems, Computer Networks & Security
- Built multiple full-stack applications demonstrating complete software development lifecycle, database design, and scalable architecture patterns
- Strong foundation in algorithm optimization, system design, object-oriented programming, and software testing methodologies
- Relevant coursework: Web Development, Software Testing, Agile Development, Cloud Computing, Database Systems, Distributed Systems

ALX Software Engineering Program

2023 — 2024

ALX Africa — Remote

- Intensive software engineering bootcamp emphasizing computer science fundamentals, low-level programming (C), system design, and software architecture
- Built 15+ projects including RESTful APIs, full-stack web applications, command-line tools, and system utilities using Python, C, and JavaScript
- Developed expertise in Git workflows, Linux/Unix administration, shell scripting, collaborative development, and technical interview preparation
- Completed daily algorithmic problem-solving and LeetCode-style challenges focusing on data structures, algorithms, and computational complexity

Software Development Bootcamp

June 2022 — December 2022

Moringa School — Nairobi, Kenya

- Completed intensive 24-week full-stack development program covering JavaScript, TypeScript, React, Node.js, Python, and database management
- Graduated in top 15% of cohort with 8+ production-ready applications demonstrating software engineering best practices and modern development workflows
- Gained hands-on experience with agile methodologies, test-driven development, pair programming, and collaborative coding practices

KEY PROJECTS

SmartSchedule Healthcare — Enterprise AI-Powered Healthcare SaaS Platform — .NET

10, C#, ASP.NET Core, Blazor, Azure, Terraform

github.com/edogola4/smartschedule-healthcare

- Architecting enterprise-grade healthcare appointment scheduling SaaS platform on .NET 10+ and Azure targeting \$150B market opportunity with projected 40% no-show reduction and 50% administrative efficiency gains for healthcare providers
- Designed comprehensive technical architecture including microservices pattern, CQRS/Event Sourcing, and cloud-native Azure infrastructure (App Services, SQL Database, Service Bus, Redis Cache, Key Vault) documented in 50+ page technical specification
- Leading full software development lifecycle from requirements gathering to deployment: created 200+ user stories with acceptance criteria, planned 6-sprint MVP roadmap, and established GitHub project

board with 36 tracked issues across authentication, scheduling, notifications, and provider dashboard features

- Implementing Infrastructure as Code with Terraform for automated Azure environment provisioning (dev, staging, prod) with complete networking, security, database, and monitoring modules ensuring HIPAA compliance and enterprise-grade security
- Building CI/CD pipeline with Azure DevOps including automated testing (xUnit), code quality analysis (SonarQube), and containerized deployments with Docker for consistent environments
- Developing RESTful APIs with ASP.NET Core, Entity Framework Core for SQL Server data access, JWT authentication, role-based authorization, and comprehensive Swagger/OpenAPI documentation
- Creating responsive frontend with Blazor WebAssembly and real-time features using SignalR for live appointment updates and notifications
- Integrating Azure Cognitive Services and ML.NET for AI-powered no-show prediction (target 85+ AUC-ROC, 78% precision) and intelligent scheduling recommendations
- Established comprehensive documentation including technical architecture, market research report, go-to-market strategy, and project management deliverables demonstrating product thinking and business acumen
- Managing agile development process: sprint planning, backlog refinement, GitHub issue templates for user stories/bugs/technical tasks, and project tracking for 12+ month development roadmap

Blazor CRUD Application with Real-Time Features — C#, .NET Core, Blazor Server, Entity Framework Core, SignalR, SQL Server
github.com/edogola4/blazor-crud-demo

- Built production-ready CRUD application with clean layered architecture (Data Access, Business Logic, Presentation) demonstrating .NET Core proficiency
- Implemented Entity Framework Core with code-first approach for database operations, including proper configuration, relationships, and migrations
- Integrated SignalR for real-time notifications and live updates across connected clients, improving user experience with instant data synchronization
- Applied SOLID principles, dependency injection, repository pattern, and AutoMapper for maintainable, testable, and scalable code architecture
- Wrote unit tests for business logic and service layers, achieving 85% code coverage using xUnit testing framework

Full-Stack E-Commerce Platform — React 18, TypeScript, Node.js, Express.js, PostgreSQL, Redux Toolkit, JWT
github.com/edogola4/tinytots

- Architected and developed complete e-commerce application with React TypeScript frontend and Node.js Express backend following MVC architecture and RESTful principles
- Implemented comprehensive RESTful API with 20+ endpoints for user authentication (JWT), product management, shopping cart operations, and order processing
- Designed normalized PostgreSQL database schema with optimized queries, proper indexing, and foreign key relationships for data integrity and performance
- Built responsive frontend with React 18, TypeScript, and Redux Toolkit for global state management, ensuring type safety and maintainable code
- Wrote comprehensive unit tests using Jest and integration tests for API endpoints, achieving 85% code coverage with automated testing pipeline

- Deployed production application on AWS infrastructure with CI/CD pipeline using GitHub Actions for automated testing and deployment

Real-Time Collaboration Platform — TypeScript, Node.js, Socket.io, React, Redis, MongoDB, WebSockets

github.com/edogola4/code-editor

- Built collaborative coding platform with WebSocket connections using Socket.io for real-time data synchronization and multi-user collaboration
- Developed scalable backend microservices architecture with Node.js and Express.js, implementing session management with Redis for high performance
- Created clean, maintainable frontend using TypeScript and React with component-based architecture, ensuring type safety and code reusability
- Implemented MongoDB for document storage with optimized queries and indexing strategies for efficient data retrieval
- Integrated comprehensive error handling, logging with Winston, and monitoring for production reliability and debugging
- Documented system architecture, API specifications, deployment processes, and development guidelines for team collaboration

CERTIFICATIONS & TRAINING

- **ALX Software Engineering Program** — Full-stack development, algorithms, system design (2023-2024)
- **Moringa School Software Development Bootcamp** — Top 15% graduate (2022)
- **Continuous Learning:** Regular participation in technical webinars, online courses, and coding challenges

PROFESSIONAL ATTRIBUTES

Software Engineering Excellence:

- Strong understanding of SOLID principles, design patterns (Repository, Factory, Singleton, CQRS), and clean code architecture
- Proficient in agile ceremonies: daily standups, sprint planning, retrospectives, backlog grooming, user story creation, and estimation sessions
- Expert in Git workflows including branching strategies (Git Flow), pull requests, code reviews, merge conflict resolution, and version control best practices
- Experienced in technical documentation: architecture diagrams, API specifications, user guides, and comprehensive project documentation
- Active participant in pair programming sessions and collaborative problem-solving for knowledge sharing and code quality improvement
- Demonstrated project management abilities: backlog refinement, issue tracking, sprint planning, and roadmap development for complex projects
- Commitment to continuous learning through technical documentation, online courses, coding challenges, and staying current with industry trends

Communication & Collaboration:

- Excellent verbal and written communication skills demonstrated through technical documentation, presentations, and stakeholder interactions

- Proven ability to collaborate effectively with cross-functional teams including QA engineers, product managers, designers, and senior developers
- Strong analytical and problem-solving skills with ability to break down complex requirements into manageable, actionable tasks
- Receptive to constructive feedback and mentorship with eagerness to learn, improve technical skills, and contribute to team success
- Experience mentoring junior developers and conducting knowledge-sharing sessions on best practices and technical concepts
- Product thinking mindset: understanding market opportunities, user needs, and translating business requirements into technical solutions
